ABeeDev

## Your SaaS Development Engineering

A solution for all development engineering disciplines
A modular offering up to security testing.

Introduction

ABeeDev is a comprehensive SaaS project management solution that can handle :
- **Requirements Management** : contracts, standards, regulations, specifications, etc...
- **Activity Management:** schedule tracking, and reporting
- **Version Management** and continuous integration as CI/CD
- **Global Configuration Management** of product and product variants
- **Test and Control Management** (manual and automated)
- **Architecture Model Management** (UML / SysML)

Benefits

- Rapid provisioning of ELM features tailored to your needs
- Deployment of ELM for your specific production projects as well as testing needs / Sandbox (such as training, and process model refinement, ...)
- Unlimited declared users for a defined number of concurrent accesses
- Integration with testing tools for DevOps and DevSecOps deployment
- Server ELM updates to the latest versions and patchs

Ready-to-use development environment	Each user member of a team has dedicated roles and permissions.
The ease and speed of the Cloud (French DataCenter)	Expert technical support for ELM functions and processes: Agile, SAFe, V-model…
A single tool with dashboards to track your projects and manage risks	Collaborative environment facilitated by reviews, comments, and discussion threads.

ABeeDev : ELM and DevSecOps offering

Your SaaS Development Engineering

ABeeDev-1 : Available Modules for ELM and DevSecOps

The offering is modular* and extensible based on your needs and process maturity :

- ELM_RM : Requirements Management
- ELM_CCM : Task Management + Scheduling and Reporting + Version control
- ELM_QM : Test Plan Management and Execution Reporting
- ELM_BASE : Includes the three ELM functions ELM_RM + ELM_CCM + ELM_QM
- ELM_GCM : Global Configuration Management and Product Line Management
- ELM_AM : UML / SysML Architecture Management

DevSecOps : Integration with tools such as :

- Ci_Accelerate : PipeLine Management
- Ci_SAC : Code Vulnerability Analysis in the IDE
- Ci_FT : Functional Web Interface Testing, ... + API testing + Performance Testing
- Ci_IAST : Interactive Security Testing
- Ci_DAST : Dynamic Security Testing
- Ci_SAST : Static Security Testing
- Cd_Launch : Deployment Management

Possibility of integration with existing tools, subject to study

Others ABlogiX hosted solutions for System & Network Security:

- ABeeFix : System & Software Patch Management (BigFix)
- + System Vulnerability Analysis (Tenable)

Please contact us for pricing based on modules and the number of concurrent users.

Our ABeeDev offering can be complemented by the following service offerings:
- Support and guidance on tools and process improvement
- Training on tools (for administrators and users)
- Training on engineering methods (VSM, Agile, Systems Engineering, Requirements Engineering, ...)
- Project oversight by a dedicated contact (KATA : Key Account Technical Advisor)
